1 Introduction

The Ajmal Furniture Project is an online e-commerce platform designed to sell furniture for homes and offices. It offers a user-friendly shopping experience, allowing customers to browse, select, and purchase furniture conveniently. The platform aims to meet the growing demand for online furniture retail in Pakistan by providing a secure, efficient, and accessible system. Key features include product browsing, shopping cart management, secure payments, user accounts, and inventory tracking, all tailored to enhance customer satisfaction and streamline business operations.

2 Objectives

The project focuses on achieving the following goals:

- Provide an intuitive online platform for customers to purchase furniture.
- Ensure secure user authentication and payment processing.
- Enable efficient management of products, orders, and inventory.
- Reach a broad customer base, targeting middle and upper-middle-class urban buyers.
- Support scalability for future growth in product offerings and traffic.

3 Functionalities

The platform includes core features to deliver a complete e-commerce experience.

3.1 User Accounts

- **Registration:** Customers create accounts with name, email, password, and contact details.
- **Login/Logout:** Secure login and a logout option in the navigation bar for easy access.
- **Authentication:** Restricts access to checkout and payment pages to logged-in users, redirecting others to the login page.

3.2 Product Browsing

- **Catalog:** Displays furniture organized by categories (e.g., bedroom, living room) and materials (e.g., wood, metal).
- **Search and Filter:** Allows searching by keywords and filtering by price or category.
- **Product Details:** Shows images, descriptions, prices, and stock status for each item.

3.3 Shopping Cart

- **Add Items:** Customers add products to their cart with desired quantities.
- **Manage Cart:** View, update quantities, or remove items from the cart.
- **Continue Shopping:** Option to return to the homepage for more browsing.

- **Cart Retention:** Keeps items in the cart until checkout or logout.

3.4 Payment and Checkout

- **Checkout:** Customers review cart items, enter shipping details, and select payment methods.
- **Payment Options:** Supports credit cards and local payment gateways (e.g., EasyPaisa).
- **Order Confirmation:** Provides a receipt with order details and delivery estimates.
- **Stock Updates:** Automatically adjusts inventory levels after successful orders.

3.5 Inventory Management

- **Real-Time Tracking:** Monitors stock levels for all products.
- **Low Stock Alerts:** Notifies administrators when inventory is low.
- **Stock Updates:** Reduces stock quantities upon order completion.

3.6 Admin Tools

- **Product Management:** Add, edit, or remove products and categories.
- **Order Management:** Track and update order statuses (e.g., Pending, Delivered).
- **Customer Support:** View customer details and assist with inquiries.
- **Sales Insights:** Generate reports on sales and popular products.

3.7 Additional Features

- **Responsive Design:** Works seamlessly on desktops, tablets, and mobiles.
- **Navigation:** Simple menu with links to Home, Categories, Cart, and Login/Logout.
- **Security:** Protects user data and transactions from common threats.
- **User Feedback:** Displays clear messages for errors or invalid actions.

4 Technical Overview

The platform is a web application built with:

- **Front-End:** HTML, CSS, and JavaScript for an interactive and appealing interface.
- **Back-End:** PHP for server-side operations like user authentication, cart management, and payments.
- **Database:** MySQL to store product, user, order, and inventory data.
- **Hosting:** Deployed on ByetHost for reliable access and cost efficiency.

5 Implementation

5.1 Development

- Designed a clean, intuitive interface for easy navigation.
- Built front-end pages for browsing, cart, and checkout.
- Developed back-end logic for secure authentication, payments, and stock updates.
- Created a MySQL database to manage all data efficiently.
- Tested functionality, security, and responsiveness to ensure a smooth experience.

5.2 Deployment

- Uploaded the application to ByetHosts free hosting service.
- Configured the MySQL database and connected it to the platform.
- Tested the live site to confirm all features work as intended.

5.3 Challenges and Solutions

- **Navigation Issues:** Fixed inconsistent links for seamless browsing.
- **Stock Management:** Ensured accurate inventory updates after orders.
- **User Experience:** Improved button placement for better usability.

6 Business Context

- **Market Demand:** Growing interest in online furniture shopping in Pakistan due to urbanization and internet access.
- **Target Audience:** Urban middle and upper-middle-class customers seeking convenience and variety.
- **Revenue Model:** Sales of furniture products, with potential for future services like rentals.
- **Competitive Edge:** User-friendly design, secure transactions, and real-time inventory updates.

7 Future Plans

- Add personalized product recommendations.
- Develop a mobile app for wider reach.
- Support multiple languages (e.g., Urdu) for inclusivity.
- Integrate advanced sales analytics for business insights.

8 Conclusion

The Ajmal Furniture Project delivers a robust online platform for furniture retail, offering customers a convenient way to shop and administrators tools to manage operations. With features like secure payments, real-time stock updates, and an intuitive interface, it meets the needs of the modern furniture market. The system is poised for growth, with plans to enhance functionality and expand its reach.
